

NICOLÁS CLOS

Software Engineer

SUMMARY

I aim to grow in challenging environments by creating value for users, taking bold risks, executing with excellence, collaborating to win, learning continuously, and giving my best while enjoying the journey. My goal is to solve complex problems, think big, learn fast from every experience, and consistently deliver impactful results.

WORK EXPERIENCE

MERCADO LIBRE

Software Developer - *October 2024 - Present*

I am part of an incredible team as a frontend developer, fulfilling the role of software engineer, performing QA tasks, helping to organize tasks and release management.

- Development: Typescript, React Js, Redux, Node Js, Express, Java, Golang.
- Led the development of an internal automation tool from scratch, proactively designing and implementing an e2e testing platform using Gherkin/Cucumber, Playwright, and Cypress to optimize QA processes and reporting efficiency.
- Monitoring & Data Analytics: Experienced with Grafana, Datadog, Looker Studio, and internal Mercado Libre tools for automated data pipelines and metric tracking. Skilled in SQL and BigQuery for querying and visualizing large-scale datasets.
- Agile methodologies: Scrum, Kanban, Trello Tools: Jira, Git, Github, Slack, CI/CD | Practices: Code Reviews, Pair Programming, Sprint Planning, Retrospectives and responsible for weekly production releases.

ENFOKE

Technical and Functional Analyst - *July 2022 - December 2023*

Frontend Developer - *December 2023 - October 2024*

Started as a Technical and Functional Analyst in a leading software company for medical centers and hospitals in Argentina, quickly demonstrating strong database management and programming skills. Took on automation projects using Cypress and contributed to frontend tasks, gaining significant visibility. Progressed to Frontend Developer, driving impactful solutions and contributing to key projects that improved efficiency and user experience.

FREELANCER

Fullstack Developer - *2020 - Present*

Started creating personal projects and developing web applications for small businesses and acquaintances using the MERN stack.
